Abstract of **BG101704**

The formulation find application in the veterinary medicalpractice in the treatment of helminthosis - nematodosis and trematodosis occurring in ruminants. It contains the usualauxiliary substances and combination of avermectines and closantel(or its soluble salts) in ratio from 1:2 to 1:80. The preparationhas antiparasitic effect expressed by gamotoxic activity on theparasite gametes by interrupting their reproductive abilities. Byit the environment is kept free of disinfections, the farm animalsbecome healthier and their output increases.
